Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

A bank generates secure codes using 3-digit numbers where each digit is unique, and the code must be divisible by 3. You are tasked with generating the first N such codes based on user input, ensuring the digits are unique and the number is divisible by 3.

Note: Use nested for loops to solve.

Input Format

The first line contains an integer N representing the number of valid codes to generate.

Output Format

The output prints N lines, each line contains a valid 3-digit code.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 5

Output: 102

105

108

120

123

Answer

```
// You are using Java
import java.util.Scanner;
class Main {
    public static void main(String[] args) {
        Scanner scanner = new Scanner(System.in);
        int n = scanner.nextInt();
        scanner.close();
        int count = 0;
        boolean done = false;
        for (int i = 1; i <= 9 && !done; i++) {
            for (int j = 0; j <= 9 && !done; j++) {
                for (int k = 0; k <= 9 && !done; k++) {
                    if (i != j && i != k && j != k) {
                        int number = i * 100 + j * 10 + k;
                        if (number % 3 == 0) {
                            System.out.println(number);
                            count++;
                            if (count == n) {
                                done = true;
                            }
                        }
                    }
                }
            }
        }
    }
}
```

Status : Correct

Marks : 10/10
